

## THE KEY ROLE OF THE UNITED NATIONS AND THE EUROPEAN UNION IN PROTECTING THE ENVIRONMENT IN THE CONTEXT FIGHT AGAINST CLIMATE CHANGE

The fight against the climate change is one of the key issues in the current XXI century in the framework of the main International Organizations. In the United Nations, there have been important developments in the last years. In the UN Summit Rio+20 on sustainable development, climate change was declared a key problem for the whole international community. And the new Paris Agreement is the key legal instrument in order to achieve the goal of diminishing the global negative effects of climate change. Also in the EU the goals to achieve are very ambitious but necessary in terms of reducing the negative effects of Greenhouse Gases. The future of mankind, in relation with the protection of the Environment as a human right, will depend on the efficiency in implementing by the states the commitments in relation with the current and future binding international agreements.
